

InfiniStats Fact Sheet

www.infinistats.com

info@infinistats.com

InfiniStats is a secure and intelligent data repository accelerating accurate data collection, benchmarking and reporting.

Now in use by over 100 local government authorities across England, InfiniStats is ready to welcome your organisation.

Flexible and convenient data collection

InfiniStats has data collection methods to suit a variety of use-cases.

Bulk data upload

Data can be imported directly from Excel and other spreadsheet or database applications.

User input

Authorised users can login to the InfiniStats web application and input their department or organisation's data, or use the user-friendly bulk upload tool for larger datasets.

Email survey collection

To collect data from a large number of individuals (eg employee surveys), a unique survey link can be emailed to each person inviting them to complete a survey. The data is anonymised on input and added to the dataset.

Quick and informative live analysis

Authorised users can login to the InfiniStats web application and query the dataset in a variety of ways. A smooth and lightning fast interface lets you get right to the data you're looking for without any manual data manipulation. Graphs and charts can be generated from the most up-to-date data and exported directly to other applications.

Drill down into larger datasets and benchmark with other departments or organisations at any level.

Choose from an array of data visualisation methods.

Organisation or department names can be anonymised or displayed as an alias where necessary.

Reports and Scorecards

Generate tailored reports and scorecards for immediate download in PDF format. Reports are fully branded with organisational logo and colours, and include an automatically generated textual summary of the data including trend analysis.

Use the in-application report preview to annotate your reports with your own comments and analysis – your annotations appear on the final exported report.

Add global notes and explanations to be displayed in an appendix for all organisations or departments that generate reports containing your data.

Scorecards can be printed as A3 for an at-a-glance summary of your organisation or department's values in this and previous periods compared to the averages of others in your group.

Dashboards

Dashboards give a one-page summary of your data with a rich array of charts, infographics and dynamically generated textual analysis.

We handle the setup of dashboards tailored to your precise needs, all included as part of your subscription.

Collaboration

User Surveys allow users to create smaller, ad-hoc surveys in multiple different formats that are answerable by other users in the same organisation or group. Optional instant, daily or weekly digest emails inform users of new User Surveys to be answered and drive an increased response rate.

Live results are displayed to respondents, and a comments area is available for users to discuss the survey and results in greater detail.

Full data ownership and data mobility

Export a full and current copy of all your data at any time in Excel or CSV format, to work with in a spreadsheet or import to another application.

Granular permission control

Each organisation has one or more superusers who assign access permissions to users within their organisation. Permissions can be assigned on a per-user and per-survey basis, with full or read-only access. All data is transmitted over a secure connection.
